

# MAR 19890005: MAYBELLE RIVER

Received date: Sep 30, 1989

Public release date: Oct 01, 1990

## ***DISCLAIMER***

By accessing and using the Alberta Energy website to download or otherwise obtain a scanned mineral assessment report, you ("User") agree to be bound by the following terms and conditions:

- a) Each scanned mineral assessment report that is downloaded or otherwise obtained from Alberta Energy is provided "AS IS", with no warranties or representations of any kind whatsoever from Her Majesty the Queen in Right of Alberta, as represented by the Minister of Energy ("Minister"), expressed or implied, including, but not limited to, no warranties or other representations from the Minister, regarding the content, accuracy, reliability, use or results from the use of or the integrity, completeness, quality or legibility of each such scanned mineral assessment report;
- b) To the fullest extent permitted by applicable laws, the Minister hereby expressly disclaims, and is released from, liability and responsibility for all warranties and conditions, expressed or implied, in relation to each scanned mineral assessment report shown or displayed on the Alberta Energy website including but not limited to warranties as to the satisfactory quality of or the fitness of the scanned mineral assessment report for a particular purpose and warranties as to the non-infringement or other non-violation of the proprietary rights held by any third party in respect of the scanned mineral assessment report;
- c) To the fullest extent permitted by applicable law, the Minister, and the Minister's employees and agents, exclude and disclaim liability to the User for losses and damages of whatsoever nature and howsoever arising including, without limitation, any direct, indirect, special, consequential, punitive or incidental damages, loss of use, loss of data, loss caused by a virus, loss of income or profit, claims of third parties, even if Alberta Energy have been advised of the possibility of such damages or losses, arising out of or in connection with the use of the Alberta Energy website, including the accessing or downloading of the scanned mineral assessment report and the use for any purpose of the scanned mineral assessment report so downloaded or retrieved.
- d) User agrees to indemnify and hold harmless the Minister, and the Minister's employees and agents against and from any and all third party claims, losses, liabilities, demands, actions or proceedings related to the downloading, distribution, transmissions, storage, redistribution, reproduction or exploitation of each scanned mineral assessment report obtained by the User from Alberta Energy.

**A REPORT ON GROUND GEOPHYSICAL SURVEYS  
CONDUCTED IN THE MAYBELLE RIVER AREA  
OF NORTHERN ALBERTA**

On Behalf Of  
**Uranerz Exploration and Mining Limited.**

**1. INTRODUCTION**

From January 29th and February 23rd, 1988, Time Domain Electromagnetic (TDEM) surveys were conducted on behalf of Uranerz Exploration and Mining Limited (henceforth called UEM) on the Maybelle River Project 71-42 in northern Alberta, by JVX Ltd.

The survey employed fixed loops of 600m x 600m and 800m x 800m and moving loops of 100m x 100m, and 200m x 200m with a nominal station separation of 50 metres.

**2. SURVEY LOCATION AND ACCESS**

The survey area is located in the Maybelle River area of northern Alberta approximately 100km southeast of Fort Chipewyan.

Figure 1 shows the location of the survey area with respect to nearby population centres at a scale of 1:5,000,000.

**3. SURVEY GRID AND COVERAGE**

Survey locations are illustrated in figure 2 at scale of 1:125,000. Map 1 of appendix II illustrates the TDEM coverage at a scale of 1:10,000. A total of approximately 18.65 line-km of fixed loop coverage and approximately 2.55 line-km of moving loop coverage was achieved. Daily activity, applicable permit areas and daily production are detailed in table I below.

**4. PERSONNEL**

Mr. Howard Northfield - Geophysicist/Party Chief. Mr. Northfield operated the Geonics EM-37 TDEM system and compiled the data with the Compaq Portable II microcomputer and Geonics software. Mr. Northfield acted as party chief and was responsible for data quality and the day to day operation and direction of the survey.

Mr. A. Blais, Mr. G. Locke and Mr. E. Ocheewasawan - acted as field assistants.

Casusal assistants were hired locally when necessary

Mr. Howard Northfield - Geophysicist. Mr. Northfield prepared this logistical report.

J V X

Mr. Phil Robertshaw - Senior Geophysicist, UEM Ltd. Mr. Robertshaw provided overall supervision of the survey and reporting from the Jas Lake camp.

Mr. Blaine Webster - President, JVX Ltd. Mr. Webster provided overall supervision of the survey and reporting from the Toronto office.

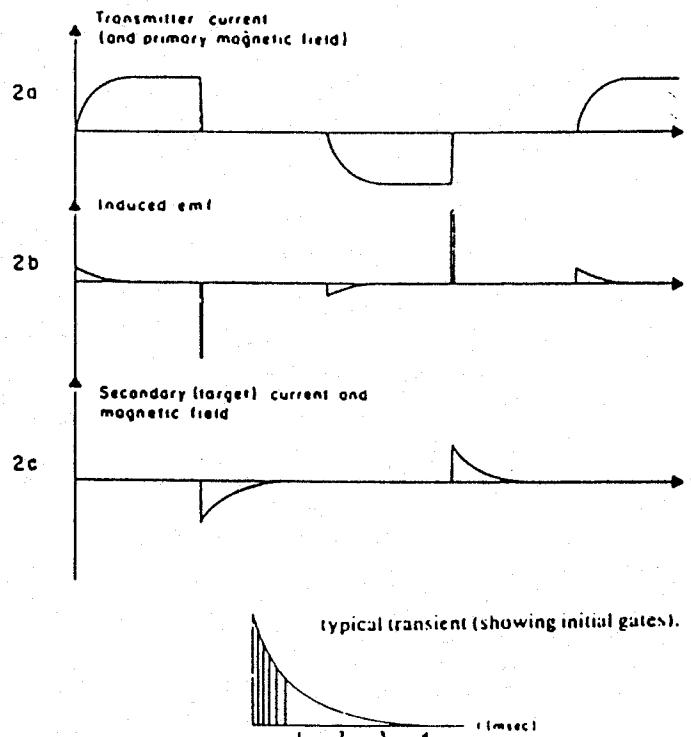

## 5. INSTRUMENTATION

5.1 Receiver See Appendix I

5.2 Transmitter See Appendix I

5.3 Data Processing

The TDEM survey data were archived, processed and plotted by a Compaq portable II microcomputer using an Epson FX-286 dot matrix printer. The system was configured to run the Geonics software package, a suite of programs that was written specifically to interface with the EM-37 receiver and data logger. At the conclusion of each day's data collection, data resident in the data logger's memory was transferred, via serial communication link, to the computer - thereby facilitating editing, processing and presentation operations. All data was archived on floppy disk.

**6. SUMMARY:**

From January 29th to February 23rd, 1989, JVX Limited carried out TEM surveys on behalf of UEM on the Maybelle River Project 71-42 in northern Alberta.

The survey employed fixed loop and moving loop techniques using a 50 metre sampling interval. A total of approximately 18.65 line-km of fixed loop and approximately 2.55 line-km of moving loop coverage was achieved.

The digital data from this survey has been archived by JVX. One copy of the data on diskette was given to UEM at the conclusion of the survey.

The copy of all the data will be held by JVX on UEM's behalf for a period not less than five years. UEM may at any time within this period ask for copies of the raw data or derivative products.

If there are any questions with regard to the survey please do not hesitate to call the undersigned at JVX Ltd.

Respectfully submitted,

JVX Ltd.

Howard J. Northfield, B.Sc.  
Geophysicist

Blaine Webster, B.Sc.  
President

## GEONICS EM37-3 DIGITAL DATA PAC DDP37

Geonics Limited is pleased to introduce a new data logger/receiver controller for their EM37-3; the DAS54-P now the standard logger component of Geonics Digital Data Pac DDP37.

Designed to assist in the editing and interpretation of the large volume of survey data which quickly results from surveys carried out with the EM37-3 Transient Electromagnetic System, DDP37 consists of the DAS54-P logger, and a set of software utilities for operation on IMB PC or compatible microcomputers.

The DAS54-P is tailored specifically for the EM37-3, providing digital storage for up to 370 sets of measurements and automatically controlling operation of the receiver so that measurements can be made without access to the EM37-3 front panel. Collection and averaging of two polarity measurements is automatic for each set, providing both high accuracy offset removal and maximum storage efficiency. The operator can easily review all 22 data channels or any of the digital or header data (survey line, station number, gain, etc.) for any recorded set. The unit is powered with its own re-chargeable battery for minimal drain on the EM37-3, and with additional power from the EM37-3 can be operated at temperatures down to -30°C.

Geonics Limited has standardized on the IBM PC family of microcomputers for handling and interpreting EM37 data. The more rugged clones, such as the Compaq portables, provide a relatively inexpensive, transportable, high-capability computing facility in a format that has become widely supported throughout the scientific, geophysics and computer communities.

Continued.....

Users of the EM37-3 Digital Data Pac are supplied with a suite of software facilities for acquisition, editing, and interpretation of EM37 survey data. Program POL37 provides the interface to the DAS54-P, transferring recorded data from the logger to the computer or loading programs into the logger using the standard RS232C protocol. Once in the computer, data can be readily edited and displayed using program DAT37, and different reduction procedures carried out to generate profiles or decay plots as raw field data, turnoff corrected impulse response, integrated step response, or late stage apparent resistivity or conductivity. Outputs are available for line printer and HP 7470 plotter.

Interpretation is aided by several forward modelling facilities specially written for rectangular transmitter geometries. MOD37 allows the operator to model and combine the instrument responses for geological structures including:

- (i) Uniform halfspace;
- (ii) Infinite horizontal thin conductive sheet at depth;
- (iii) Finite rectangular thin conductive plates.

Program RECTAN models the response for arbitrary horizontal conductivity layering. By comparing actual field data with the results of forward modelling, the interpreter can quickly identify likely candidates for the sub-surface structure.

Also available as an additional option is TEMIX, a program for the automatic inversion of EM37 soundings to a horizontally layered model.

Geonics Limited is continuing to develop additional techniques for the interpretation of EM37 survey data, and as new programs are developed they will be available to users of the EM37-3.

## 2. INPUT AND OUTPUT CONNECTIONS

Input Data Via

- Keyboards and 50 pin "D" subminiature connector -  
Cannon P/N DD50P

Pin assignments for the connector are as follows:

<u>PIN</u>	<u>DESCRIPTION</u>	<u>PIN</u>	<u>DESCRIPTION</u>
1	Ch 1	5	Ch 5
2	Ch 2	6	Ch 6
3	Ch 3	7	Ch 7

## DASS4-P TECHNICAL SPECIFICATIONS

### 1. GENERAL CHARACTERISTICS

Number of Analog Channels	:	22
Number of Records	:	370 (4 digit recording) 260 (5 digit recording)
Analog Inputs	:	$\pm 5$ Volts Max.
Recording Resolution	:	0.1 mV
Analog Input Impedance	:	100 k $\Omega$
Display	:	2 Line by 16 character alphanumeric LCD.
Keyboard	:	Hermetically sealed membrane keyboard with 21 keys.
Number of Digital I/O	:	9
Output Communication	:	Serial RS-232C
Output Baud Rate	:	300 to 19200 BPS
Programming Language	:	Polycode
Internal Power		
Back-up Battery	:	Alkaline 9-V / 40 hours
Main Battery	:	6 Size "AA" - Rechargeable
External Power Requirements (from EM37-3)		
Normal Mode	:	$\pm 10$ mA at $\pm 12$ volts
Display	:	600 mA at 12 volts (only when it turns on)
Temperature Range	:	-30°C to 50°C
Dimensions	:	22 x 11.5 x 6.5 cm
Weight	:	1.8 kg

MSB	LSB	FREQ.
0	0	LOW
0	1	MED
1	0	HIGH

Pin 50	POLARITY
1	Positive
0	Negative

GAIN				GAIN
3	2	1	0	
0	0	0	1	1
0	0	1	0	2
0	0	1	1	3
0	1	0	0	4
0	1	0	1	5
0	1	1	0	6
0	1	1	1	7
1	0	0	0	8
1	0	0	1	9

Output Data Via

: Standard RS-232C port a 25 pin  
"D" subminiature connector  
ITT CANNON P/N DB-258P

### 3. FEATURES

Storage Medium

: CMOS STATIC RAM with Battery  
back-up

Recording Time

: One record of 22 analog  
channels (two polarity  
averaged), 7 digital channels,  
and the header, takes about  
28 seconds, for integration  
 $n=8$

Analog Channels

: 22 which consist of:  
1 Primary field channel;  
1 Turn-off (T/O) channel;  
20 Output channels.

Digital Channels

: 9 lines which consist of the Freq.; Gain; Ready; and Polarity.

Header

: User inputs which consist of the: Date; Line; Station; Component; Tx Size; Tx Position; Tx Turn-off; Tx Current; Rx Coil Area; Synch. Mode and Comment.

Display

: 32 Character alphanumeric LCD with heater for low temperature capability. Heater switches on and off automatically as necessary when the temperature drops to about 3°C.

Data Recall

: Data can easily be recalled to the display.

GEONICS LIMITED

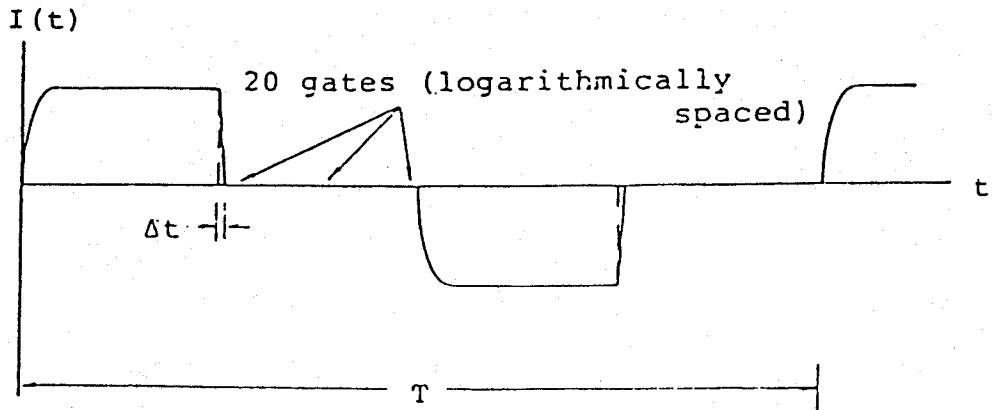

EM37-3 Ground Transient Electromagnetic System  
Technical Specifications

Transmitter

- Current Waveform - See Fig. 1
- Repetition rate - 3Hz, 7.5Hz or 30Hz in countries using 60Hz power line frequency; 2.5Hz, 6.25Hz or 25Hz in countries using 50Hz power line frequency; all six base frequencies are switch selectable.
- Turn-off time ( $\Delta t$ ) - fast linear turn-off of maximum 450  $\mu$ sec. at 30 amps into 300x600m loop. Decreases proportionally with current and (loop area) $^{1/2}$  to minimum of 20  $\mu$ sec. Actual value of  $\Delta t$  read on front panel meter.
- Transmitter loop - any dimensions from 40x40m to 300x600m maximum at 30 amps. Larger dimensions at reduced current. Transmitter output voltage switch adjustable for smaller loops. Value of loop resistance read from front panel meter; resistance must be greater than 1 ohm on lowest voltage setting to prevent overload.
- Transmitter protection - circuit breaker protection against input overvoltage; instantaneous solid state protection against output short circuit; automatically resets on removal of short circuit. Input voltage, output voltage and current indicated on front panel meter.
- Transmitter output voltage - 150 volts (zero to peak) maximum; 20 volts (zero to peak) minimum
- Transmitter output power - 2.8 kw maximum
- Transmitter wire supplied - Option (A) - 1800m #10 copper wire on 6 reels  
Option (B) - 1800m #4 aluminum wire on 12 reels  
2 reel winders supplied
- Transmitter motor generator - 5 HP Honda gasoline engine coupled to 120 volt, 3 phase, 400Hz alternator. Approximately 8 hours continuous operation from full (built-in) fuel tank.

### Receiver

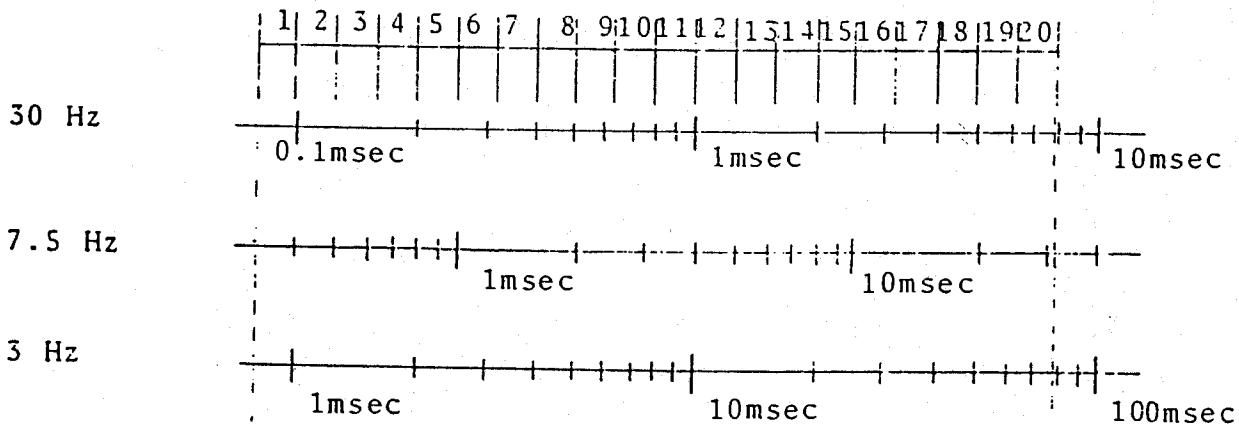

- Measured quantity  
Sensor
  - time rate of decay of magnetic flux along 3 axes
  - air-cored coil of bandwidth 40 kHz; 100cm dia. by 7x5cm cross-section. Coil holder supplied to facilitate measurement along 3 axes.
- Time channels
  - 20 time channels with locations and widths as shown in Fig. 2. Successive operation at 30Hz, then 3Hz, effectively gives 30 channels covering range from 80  $\mu$ sec. to 80 msec.
- Output display
  - 4 digit plus sign LED display; display also shows channel number and gain.
- Integration time
  - $2^n$  cycles at 30Hz; n=4,6,8,10,12,14 (switch selectable); similar integration times at other base frequencies.
- Receiver output noise referred to input
  - typically  $1.5 \times 10^{-10}$  volt/m<sup>2</sup> at last gate at 30Hz with integration time of 34 seconds. Noise will be higher during intense local spherics activity.
- Output connector
  - all 20 channels in analogue format and house-keeping functions in digital format available from output connector.
- Synchronization to Tx
  - any of the following (switch selectable)
    - (1) reference cable
    - (2) primary pulse
    - (3) 27 MHz radio link (40 channels)
    - (4) high stability (oven controlled) quartz crystals.
- Noise rejection circuitry
  - Selective clipping of atmospheric noise pulses at all times. Audio output of Rx coil (transmitter pulse blanked out) is available on built-in loud speaker for ready identification of interference.
- Receiver batteries
  - 12 volt rechargeable Gel-cell; 9 hours continuous operating time at 17°C. Two batteries and a battery charger supplied to permit charging of second battery from transmitter motor-generator during survey.

Gate Number

Gate Location and Widths (30Hz, 7.5Hz and 3Hz)

FIG. 2.

### Delivered Items

EM37-3 Ground Transient System consists of the following delivered items:

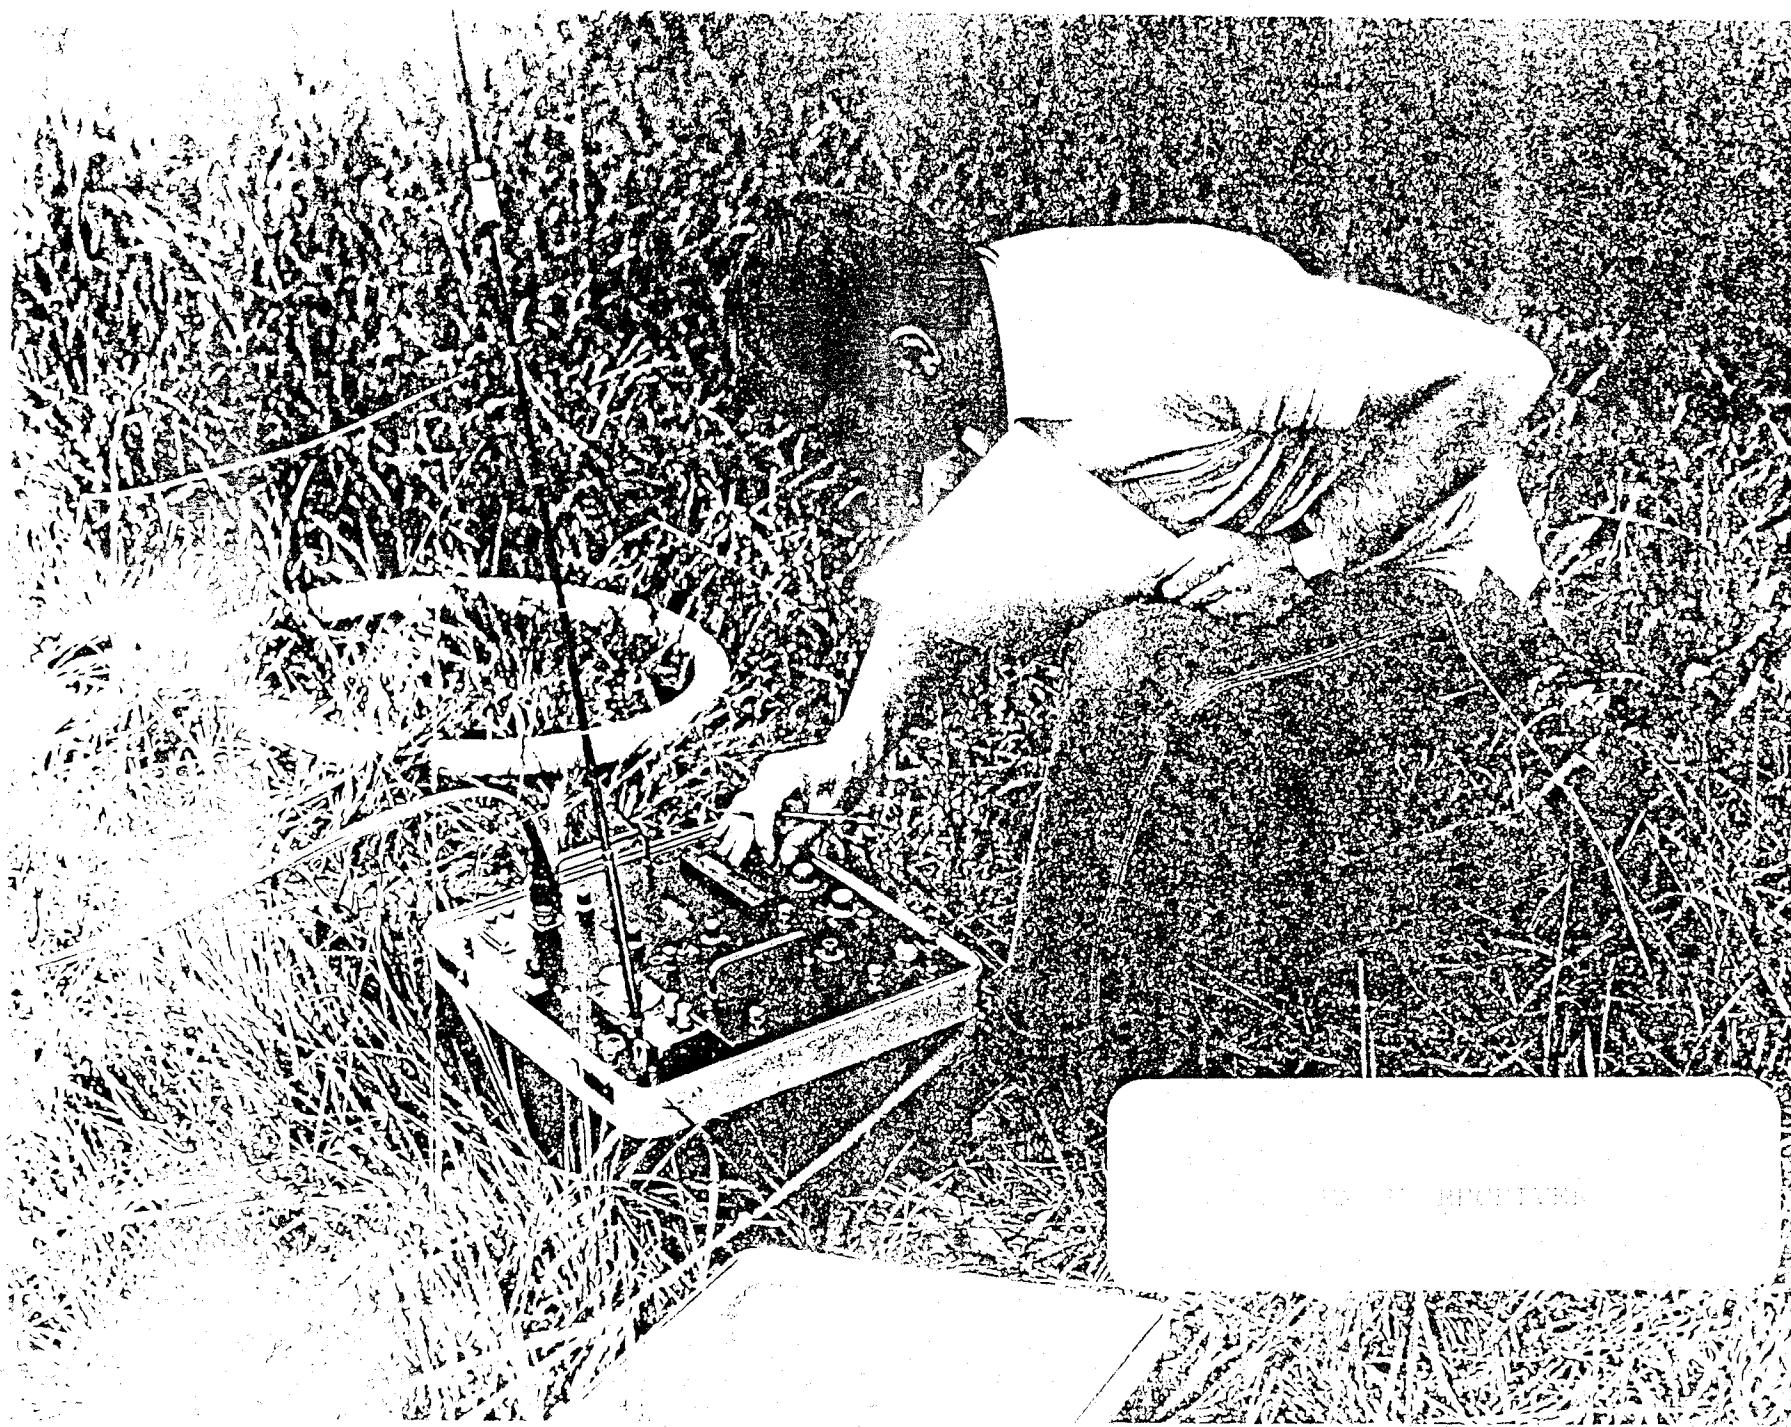

- 1 Transmitter console
- 1 Transmitter ground power unit (GPU) consisting of motor and alternator
- 1 Receiver console including battery
- 1 Receiver coil
- 1 Receiver coil holder
- 1 Spare receiver battery
- 1 Battery charger
- 1 Set interconnecting cables
- 1 Set shipping boxes
- 2 Instruction manuals
- 1 Set of data reduction programs (written in Basic)

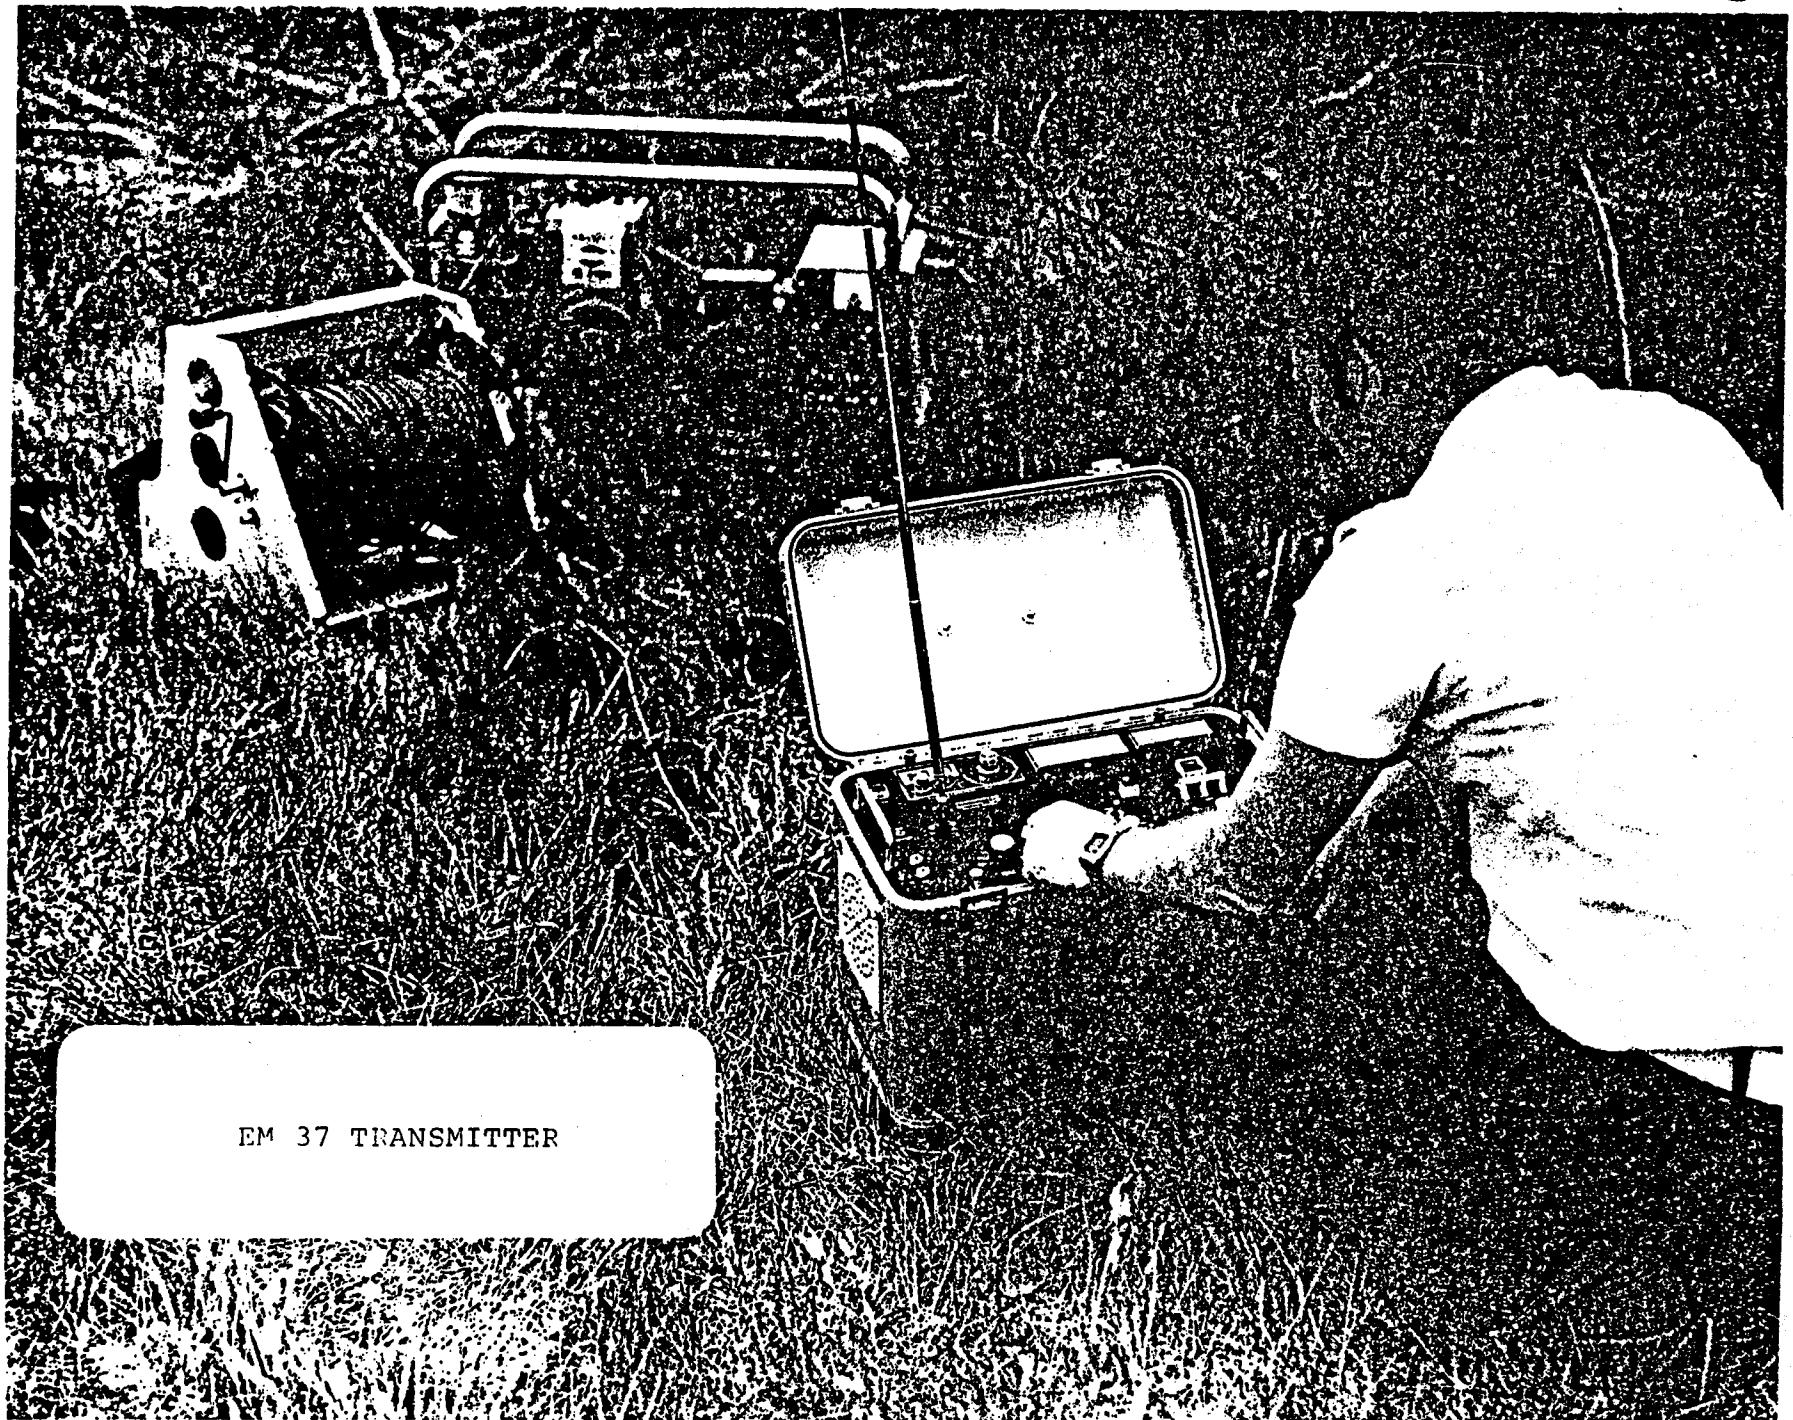

EM37-3 Transmitter Loop Option:

- 6 (or 12) reels transmitter wire (depending on Aluminum or Copper wire option)
- 2 Reel winders

	<u>Component Dimensions</u>
Transmitter console	25x42x36 cm
GPU	35x74x48 cm
Wirewinder	42x38x35 cm each (2 off)
Wire reels: Option A	33x31 (dia.)cm each 6 off
Option B	33x31 (dia.)cm each 12 off
Receiver console	38x37x27 cm
Receiver coil	100 cm dia. 7x5 cm cross-section

	<u>Component Weights</u>
Transmitter console	20 kg
GPU	60 kg
Wirewinders and loaded reels (30 amp)	130 kg (total)
Receiver console (incl. 20 amp-hour battery)	21.8 kg
Receiver Coil	8.0 kg
