MOISIVING PLUID BIVISION

Canadian Pacific Oil and Gas Limited P. O. Box 400 Calgary, Alberta, Canada

Attention: Mr. T. H. France

Subject: Reservoir Fluid Study
GPOG Taber S 12-21 Well
Taber South Field
Alberta, Canada

Our File Number: RFL 2722

Gentlemen:

Samples of separator liquid and vapor were collected from the subject well by a representative of Core Laboratories-Canada, Ltd. and submitted to our Dallas laboratory for use in a reservoir fluid study. Presented on the following pages are the results of this study.

After correction for the factors shown on page one of the report, the producing gas-liquid ratio was found to be 76.9 cubic feet of separator gas at 14.696 psia and 60° F. per barrel of stock tank liquid at 60° F.

Upon recombination of the separator products to the producing gasliquid ratio, the resulting mixture was examined in a windowed cell at the reservoir temperature of 97° F. The saturation pressure of the mixture was found to be 718 psig at 97° F. Presented on page three are the results of the pressure-volume relations of the results.

Thank you for this opportunity of serving you. If we may assist you further in any manner, please do not hesitate to contact us.

Very truly yours,

Core Laboratories, Inc. Reservoir Fluid Division

VOLUMETRIC DATA OF Reservoir Fluid SAMPLE

1. Saturation pressure (bubble-point pressure)

718 PSIG @ 97 °F.

2. Thermal expansion of saturated oil @ 2000 PSI = V @ 97 °F = 1.00906

3. Compressibility of saturated oil @ reservoir temperature: Vol/Vol/PSI:

From 2000 PSI to 1600 PSI = 4.52 × 10⁻⁶

From 2000 PSI to 1600 PSI = $\frac{4.52 \times 10^{-6}}{1600}$ PSI to $\frac{1100}{100}$ PSI = $\frac{4.61 \times 10^{-6}}{1000}$ PSI to $\frac{718}{1000}$ PSI = $\frac{4.71 \times 10^{-6}}{1000}$

4. Specific volume at saturation pressure: ft 3/lb

<u>0.01753</u> @<u>97</u> °F.
