

# MAR 19980019: WANDERING RIVER

Received date: Oct 05, 1998

Public release date: Oct 06, 1999

## **DISCLAIMER**

By accessing and using the Alberta Energy website to download or otherwise obtain a scanned mineral assessment report, you ("User") agree to be bound by the following terms and conditions:

- a) Each scanned mineral assessment report that is downloaded or otherwise obtained from Alberta Energy is provided "AS IS", with no warranties or representations of any kind whatsoever from Her Majesty the Queen in Right of Alberta, as represented by the Minister of Energy ("Minister"), expressed or implied, including, but not limited to, no warranties or other representations from the Minister, regarding the content, accuracy, reliability, use or results from the use of or the integrity, completeness, quality or legibility of each such scanned mineral assessment report;
- b) To the fullest extent permitted by applicable laws, the Minister hereby expressly disclaims, and is released from, liability and responsibility for all warranties and conditions, expressed or implied, in relation to each scanned mineral assessment report shown or displayed on the Alberta Energy website including but not limited to warranties as to the satisfactory quality of or the fitness of the scanned mineral assessment report for a particular purpose and warranties as to the non-infringement or other non-violation of the proprietary rights held by any third party in respect of the scanned mineral assessment report;
- c) To the fullest extent permitted by applicable law, the Minister, and the Minister's employees and agents, exclude and disclaim liability to the User for losses and damages of whatsoever nature and howsoever arising including, without limitation, any direct, indirect, special, consequential, punitive or incidental damages, loss of use, loss of data, loss caused by a virus, loss of income or profit, claims of third parties, even if Alberta Energy have been advised of the possibility of such damages or losses, arising out of or in connection with the use of the Alberta Energy website, including the accessing or downloading of the scanned mineral assessment report and the use for any purpose of the scanned mineral assessment report so downloaded or retrieved.
- d) User agrees to indemnify and hold harmless the Minister, and the Minister's employees and agents against and from any and all third party claims, losses, liabilities, demands, actions or proceedings related to the downloading, distribution, transmissions, storage, redistribution, reproduction or exploitation of each scanned mineral assessment report obtained by the User from Alberta Energy.

Re: Assessment Work Report, Metallic and Industrial Permits  
Permit #9394080005

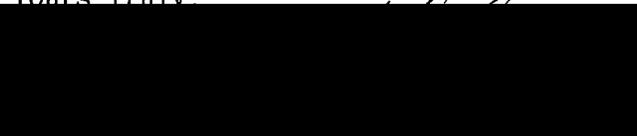

Dear Sir,

Through the work done over the past four years we have concluded permit number 9394080005 be retained for another two year term.

We have dropped permit numbers 9394080022, 9394080024 and 9394080004.

It is respectfully requested that permit number 9394080005 be renewed for another term of two years.

Yours Truly

Mineral Finders Inc.

## SUMMARY

The following report outlines assessment work performed on the Wandering River Prospect in Northern Alberta. Much work was completed this period including, an area review, access availability, satellite imagery, surface prospecting, line cutting, subterranean isotope sensing, and a drilling program.

This work indicates the presence of gold, platinum, other precious metals and a large elongated anomaly which is believed to represent a kimberlite intrusion.

## INTRODUCTION

Mineral Finders Inc. carried out an extensive subterranean isotope sensor survey of this anomaly considered to be a kimberlite intrusion. The survey was conducted to accurately outline the limits of the diatreme. The diatreme had previously been identified by surface sediment sampling for kimberlite indicator minerals. Further isotope sensing was carried out to help prove the presence of precious metals.

## LOCATION AND ACCESS

The property is located in Northeastern Alberta, fifty (50) kilometers northeast of the town of Wandering River along highway #63. (See Figure 1) The property lies on one permit encompassing 9,216 hectares. The location and area of the permit are outlined in Table 1 and displayed in Figure 2.

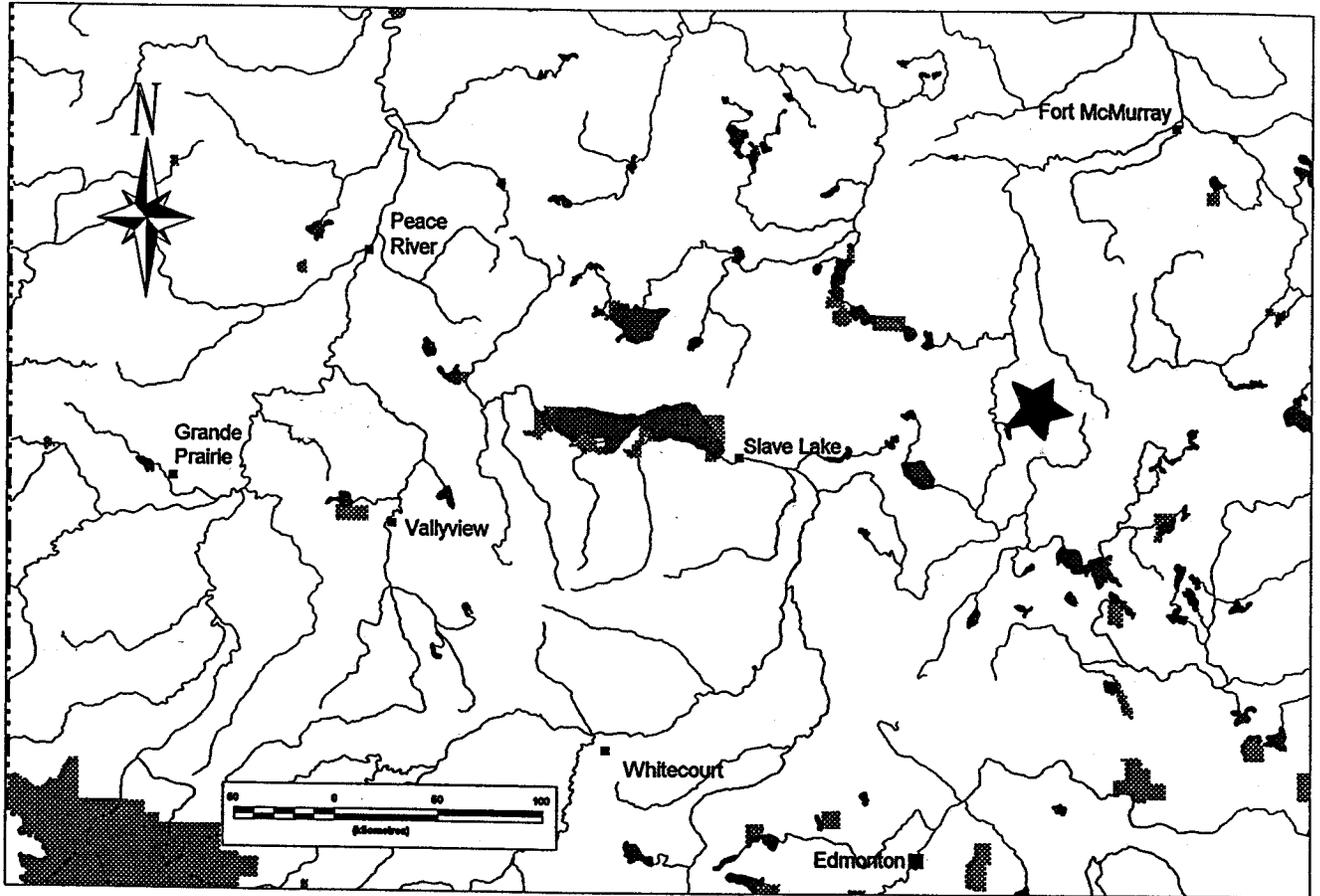

TABLE 1: LOCATION AND AREA OF PERMIT

Permit Number	Location	Area
9394080005	Twp 76 - Rge 15 - W4	9,216 Hectares

## PERMIT TABULATION

Permit #9394080005 is held by Mineral Finders Inc. This report is being submitted by Mr. Walter Koleba and Mr. James Empson, with consultation by Mr. John Kruszewski.

Figure 1: Location map for Wandering River Prospect

SCALE: 1 : 3 500 000

Figure 3:  
Satellite Imagery

## WORK PERFORMED

Over the past two year period, Mineral Finders Inc. conducted a program of till sampling and stream sediment sampling of its properties in Alberta. Since the company holds a rather large area in whole or in part under permit, sampling for most part was quite widely spread. The areas where samples were taken were generally chosen by the results of readings from a mobile Subterranean Isotope Sensor. The type of Isotope Sensor used was a Algor X110. The operator in most cases walked taking continuous readings. During this period the company with the use of available maps, published information, and aerial photography reviewed the areas from the office as well as the field. The first samples were taken from near surface, along side roads, trails, cutlines etc. These samples were transported to Edmonton, washed, screened, then reviewed by an Alberta Geologist.

The next step taken was to do low impact exploration in the House River area, along the May Tower Road and portions of borrow pits along Highway #63. Six inch auger holes were drilled using a drill mounted on a log skidder. Averaging 15 meters in depth, the holes were logged, samples taken at five foot intervals, (approx. five lbs. each) plugged and tagged. Using heavy down pressure the auger was drilled into the ground as smoothly and quickly as possible for at least one auger length, (five feet) then tripped out "dead". This preserves a sample on the auger flight maintaining a close control on stratigraphy. Changes in character of material and approximate layer thickness can be noted. Sample taking exceptions were made if there were no apparent changes in material, extending sampling intervals up to fifteen feet. All samples were then brought to Edmonton where they were catalogued and evaluated.

After review and evaluation of Satellite imagery and numerous field trips to get sensor readings, a second drilling program was initiated. Prior to this drilling program cutlines had to be made to allow access. This second drilling program was performed under the same perimeters as the first, with the exception of hole depth variances. Samples were handled in the same manner.

## CONCLUSION

Through the work performed to date, we have concluded that our energies should be directed towards the lands which are being retained.

The property shows the presence of gold, platinum and the presence of indicator minerals associated with diamonds.

This property definitely requires further exploration, with emphasis placed directly to what appears to be a large diatreme

With the different extraction techniques being tested today, we believe the potential to recover the gold and platinum could be economically viable.

To: Hazel Henson,

Here is the additional information you requested on the expenditures for our Permits.

Western Property - Permit #: ~~9~~396030002.

Maps & Projections: \$3,610.65

- 1) Procurement and layout of all relevant maps for designated permit area. Topographical, Geological & Phase 3 Forest cover maps. (88 man Hours).
- 2) Map reading and projections for probable areas of Geological interest. (226 man hours).
- 3) Meetings and feasibility studies on projected areas of Geological interest. (112 man hours).
- 4) Administrative Expenses: Phones, faxes, computer costs and office materials.
- 5) Operational Expenses: Travel expenses, fuel and other miscellaneous expenses.

Total of 426 man hours worked in this phase.

Planning & Development: \$7,760.50

- 1) Project logistical planning for permit area. (235 man hours).
- 2) Logistic development and financial projections for area. (254 man hours).
- 3) Financial development and continued in-office and on-site planning sessions. (200) man hours).
- 4) On site visual Geological assessments and inspections. (109 man hours)
- 5) Administrative Expenses: Same as above.
- 6) Operational Expenses. Travel expenses, equipment costs, fuel and other miscellaneous expenses.

Total of 798 man hours worked in this phase.

Forestry Proposals and Applications: \$11,465.90

- 1) Meetings and discussions with Forestry officials. (116 man hours).
- 2) Preparing and delivering plans & proposals to Forestry. (564 man hours).
- 3) Re-working and delivering proposed plans to Forestry for approvals. (379 man hours).
- 4) Administrative Expenses: Same as above.
- 5) Operational Expenses: Travel expenses, fuel and other miscellaneous expenses.
- 5) Extra administrative materials and over budget operational expenses: \$1,244.73

Total of 1059 man hours.

PROJECT CONSULTANTS: \$5,895.38

- 1) Invoiced share for this permit from Karen Heslop Consulting for financial planning and investor development. \$3,745.

- 2) Additional invoice for all permits from Karen Heslop Consulting for extra hours required due to repeated delays and missed deadlines. \$2,150.38

NOTE: Invoices can be provided if required.

TOTAL MAN HOURS THIS PERMIT TO DATE = 2,278.

---

Permit #: 9396030003.

MAPS & PROJECTIONS: \$2,877.62

- 1) Procurement and layout of all relevant Geological, Topographical and Phase 3 Forest cover maps. (76 man hours).
  - 2) Map reading and projections on probable areas of main Geological interest. (131 man hours).
  - 3) Meetings and feasibility studies on projected areas of Geological interest. (89 man hours).
  - 4) Administrative Expenses: Same as previous permit.
  - 5) Operational Expenses: Same as previous permit.
- Total of 296 man hours.

Planning & Development: \$5,592.56

- 1) Project logistical planning and continued feasibility studies for permit area. (127 man hours).
  - 2) Logistics development and financial projections for area. (138 man hours).
  - 3) Financial development and continued in-office and on-site planning sessions. (209 man hours).
  - 4) On-site visual Geological inspections and assessments. (60 man Hours)
  - 5) Administrative and Operational Expenses: Same as above.
- Total of 534 man hours.

Forestry Proposal Applications: \$7235.89

- 1) Meeting and discussions with forestry officials. (29 man hours).
  - 2) Preparation and delivery of plans to Forestry Department. (336 man hours).
  - 3) Re-working and re-delivery of plans to Forestry. (267 man hours).
  - 4) Administrative and Operational Expenses: Same as above.
  - 5) Extra Administrative expenses of \$776.84
- Total of 632 man hours.

PROJECT CONSULTANT: \$3,745.00

- 1) Invoiced share for this permit from Karen Heslop Consulting.

TOTAL MAN HOURS THIS PERMIT TO DATE = 1,412.

PERMIT #: 9396030004.

Maps & Projections: \$2,877.60

- 1) Procurement and layout of all relevant maps for designated permit area. e.g. Topographical, Geological and Phase 3 Forest Cover maps. (70 man hours).
- 2) Map reading and projections for probable areas of Geological interest. (109 man hours).
- 3) Meetings and feasibility studies on projected areas of geological interest. (68 man hours).
- 4) Administrative and Operational Expenses: The same as the previous permits.

Total of 247 man hours.

Planning & Development: \$6,912.47

- 1) Project Logistical planning for this permit area. (137 man hours).
- 2) Logistics development and Financial projections for this permit area. (159 man hours).
- 3) Financial development and continued in-office and on-site planning sessions. (213 man hours).
- 4) On-site Visual Geological inspections and assessments. (80 man hours).
- 5) Administrative and Operational Expenses: The same as the previous permits.

Total of 589 man hours.

Forestry Proposals & Applications: 3,343.65

- 1) Meeting and discussions with Forestry staff. (16 man hours).
- 2) Preparations and delivery of plans and proposals to the Forestry Department. (154 man hours).
- 3) Re-working and delivery of plans and proposals to the Forestry Department for approval. (211 man hours).
- 4) Administrative and Operational Expenses: The same as the previous permits.
- 5) Extra administrative and Operational costs of \$718.29

Total of 381 man hours.

PROJECT CONSULTANT: \$3,745.00

- 1) Invoiced share for this permit from Karen Heslop Consulting.

TOTAL MAN HOURS FOR THIS PERMIT TO DATE = 1,217 Hours.

JOHN KRUSZEWSKI

Mr. kruszewski is a practicing prospecting Geological Consultant of [REDACTED] SW Calgary, Alberta. T2P 105

He attended two years of university at the University of Toronto in Ontario and two years at Mount Royal College in Calgary. He does not have a degree, however, has worked in geological exploration since 1962 and received a certificate from Idaho School of Mines, in Moscow Idaho.

Mr. Kruszewski has been involved with Mineral Finders Inc. on a consultation basis for the past two years.

Previous geological experience includes:

- staking and initial geological exploration of Baymag Mines, 2 years;
- staking and initial geological exploration of Aurun Mines Perlite;
- staking and initial testing of the diatomite mine near Kamloops, B.C.;
- acquiring coal leases, field supervisor in mapping, trenching, drilling, logging core. Gulf Minerals (coal) 2 years;
- research and field examination of rare earth prospects in Montana and Wyoming with Orhan Baykal;
- staking to drilling of Blue River B.C. carbonatites rare earth joint venture with Anshutz of Denver, Colorado;
- is a member of Mineral Exploration Group (Calgary, AB.)
- served as director of Kemano Gold Corp., now Purcell Energy;
- grass roots placer exploration to production at 24K, Cariboo, M.D. +2000 Au, 1990 - 96;
- research and locate diatremes at Crossing Creek, B.C. in a joint venture with Dr. Charles Newmarch et al now operated by Quest International in a joint venture with Anvil to complete the diamond phase;
- implemented and carried out geological field programs for Birch Mtn. Resources for the '94/'95 seasons, Ft. Steele M.D., with Dr. R. Garnett;
- 1996, Geological research, evaluation and staking program for a gold tungsten project (Sanca Gold Corp.).

**WALTER KOLEBA**

Mr. Walter Koleba of [REDACTED] Edmonton, is the President of Mineral Finders Inc. Mr. Koleba has over fifty years experience as a businessman. He has been prospecting for the past thirty years, with finds in Alberta, N.W.T., British Columbia and the United States.

**JAMES EMPSON**

Mr. James Empson has been a businessman in Alberta for twenty-five years with much of that time spent in the oil and gas industry. Starting as a hobby, his interest in mineral exploration has evolved into a business venture, with investment in Mineral Finders Inc.

## OPERATIONAL PROCEDURES

1. Always check the operational condition of the sensor before starting.  
Let "Operate Switch" on "Standby," adjust sensor N.- Meter to "50" (halfscale) no fluctuations should be present. Battery meter must be in red sector.  
When N.- Meter is fluctuating or Battery - Meter is out of red sector, the instrument is not in operational condition.
2. When the above is set accurately, connect the sensing tube to the sensor and switch to operate position.
  - a) Adjust N-Meter and P-Meter to Zero
  - b) Adjust background meter to green Sector
  - c) Set sensitivity to 6 or 7 and meter speed to "medium."

Warm-up time is two to five minutes depending upon the outside temperature. (Read also "Condensed Operation Procedures," Step 1 - 8 and Important Rules in the book.)

## SENSING PROCEDURES:

Demonstrated on Sample Isotope Log #347 for minerals and on Sample Isotope Log #436 for oil and gas.

Log #347 for minerals:

Observe!

- a) Sensitivity switch was set on "5".
- b) The neutral setting was set one mile away from the hauling area.
- c) The reading on the "zero adjust" dial was "500" and on the P-Meter "0".
- d) The background-meter was in the green sector.

## EXAMPLE:

P-meter indicated readings of more than 100 divisions shows the location of a vein of minerals. To measure the width of a vein, don't readjust the instrument to zero. Stay on the highest P-meter reading. Go slowly back to approximately 80 divisions reading on the P-meter. Drive slowly forward. When P-meter indicates more than "100" put a marker into the ground.

Drive or go further slowly forward until the P-meter comes back to it's own to approximately 80-90 divisions.

The distance between P-Meter "80" - over the saturation, back to "80" indicates the vein or placer deposits width (see Figure 6).

Example interpreted by Al on Page 347 "Minerals."

When P-Meter is saturated by more than 100 divisions stop the car (or walking), adjust P-Meter to Zero on the Zero Dial (read 456)

Neutral was "500" for this area. The ratio was  $500/456 = 44$ . Observe, the background count was 128, Neutral was 73, and the background meter was saturated.

Example A-3 was the same procedure as A-2. "Neutral 500." vein registered 369 on Zero Dial. By adjustment, the P-Meter to zero, the ratio was  $500/368 = 131$ . The result is: Vein A2 is less concentrated than Vein A3, and A 3 was recommended for mining.

NOTICE: Minerals in metallic form are always indicated on the P-Meter and sulfides are read mostly on the N-Meter. The isotope count increases and the background meter becomes saturated (i.e.: over 50) in both cases.

#### PROCEDURES FOR OIL AND GAS - LOG 436

1. Adjust and Calibrate same as procedures on Log 347 (for minerals).
2. Meter readings for oil and gas are determined by reading N-Meter, ONLY.
3. The sensitivity setting may be set lower (4 or 5) depending upon the area.

The neutral point for this area (Log 436) was "470" at the T-F location. The zero adjustment was "535", and the ratio  $470/535$  is  $-65$ .

The highest N-Meter readings were (8-North Trailer Location) at  $470/580 = 110$ . Therefore, the North Trailer location was recommended for drilling.

NOTICE: The mineral location ratio decreased ( $500/369$ )  
The oil location ratio increased ( $470/580$ )  
The background isotope "count" for minerals increased  $77/183$ .

The background isotope "count" for oil, same as neutral or lower.

The background meter for minerals - saturated.

The background meter for oil indicated from green zone to zero.

IMPORANT: When N-Meter and background meter is saturated, no oil or gas is present at this location. Maybe sulfides. In some instances when N-Meter is saturated and the background meter moves from green to zero, oil could be present, depending upon geologic evaluation. Gas is present when N-Meter and background Meter moving erratic.

# A L G O R E X P L O R E R " X "

## THE SUPERSENSITIVE SUBTERRANEAN ISOTOPE SENSOR

### CONDENSED OPERATION PROCEDURES FOR FIELD USE.

- Step 1. Start in a neutral zone approximately 1/4 to 1 mile from the area you intend to explore with the Sensor.
- Step 2. Turn "SENSITIVITY" to 6-8 by low counting ( 10-20pps) or 3-6 by high counting ( 40-100 pps) normal= 5
- Step 3. Turn Meter-Switch to " ON "  
Turn Operate -Switch to Standby or Test by Sensor @  
Turn Meter-Speed to " Medium " and adjust " N " Meter-needle in the middle of the scale and observe no fluctuation on the Meter
- Instrument is in operating condition "if"
- Step 4. a) Background-Display read " 000 "  
b) Background-Meter read " 0 "  
c) Battery-Meter read 10 Volt plus ( in red sector) depress Recorder-Switch for 5 second, if needle drops out of the red sector Battery need charged
- Step 5. If the Meters are all steady, YOU ARE READY FOR SENSING
- Step 6. After leaving the neutral zone, never adjust " SENSITIVITY " or Background during sensing. It is advisable to make a note on the Isotope-Log of the calibration of these settings. Otherwise you would have to go back and re-set the Sensor in your neutral zone
- Step 7. Zero Adjust; turn only back and forward when "N" or "P" meter is saturated (over 100) "N" or "P" meter should indicate a maximum reading between 60-90 on the meter to calculate the width of a vein.
- Step 8. Battery meter should be at all times in red sector, during operation. Charge Battery after 8-10 hour operation (over night) or 16 hour if the Recorder was in use. Battery will stay charged for appr. 24 hour operation; without Recorder use, and only 3 hours with Recorder  
Use Recorder only by important events By Airplane or Car operation use Airplane or Car 12 Volt Battery, also every time the instrument was turned off, allow, two minutes to stabilize the the Sensor before continuing to operate.

After twenty to forty hours of practice, the operator should be able to understand the relationship of the readings on the meters and the adjustments of the dials and Switches to evaluate data. It is recommended that he study the Instrument on an existing, well known mining operation, oil well and water well.

## IMPORTANT RULES:

- A. Never operate the sensor at more than 100° F. outside temperature. Protect the " P M Tube " from too long Sunheat exposure. When not in use, store sensor and tube in shadow.
- B. The best time to explore is early morning or late afternoon. The X rays of the sun will flucturate the sensor in the time period from appr. 11:00 A. M. to 2:00 P. M.
- C. If you want to compare your exploration data the next day( but not later than 48 hours ) use the same time as the previous day. ( Time is kept in the log-sheet.) † 1 hour.  
Example: Log # 36, location R 7 W # 8 - same setting --  
Time: 10:00 A. M. ( never check this point at 4:00 P. M. , when it was checked the previous day at 10:00 A. M. )
- D. Magnetic storms of the sun will flucturate the " Background " setting and " Count" . Before important explorations it is advisable to inquire the next observatory of the sun activities.  
Explore only early in the morning or late afternoon.
- E. To explore high mineralized zones set " Sensitivity " above "5" and " P " meter between 0 -- 10 starting point.
- F. To explore oil water and sulfite zones set " Sensitivity " below " 5 " and " N " meter between 0--10 starting point.

Slide variations may occur from the type of structure of the location also the amount of experience the operator has to make appropriate allowances for any given conditions.

## ALGOR X CHECK-OUT BEFORE SURVEY

- |     |     |                                                                              |    |       |
|-----|-----|------------------------------------------------------------------------------|----|-------|
| 1)  | Set | Sensitivity                                                                  | to | 5     |
| 2)  | Set | Meter-Switch                                                                 | to | On    |
| 3)  | Set | Ion-Switch                                                                   | to | On    |
| 4)  | Set | Operate-Switch                                                               | to | St-By |
| 5)  |     | Battery-meter must be in red section.                                        |    |       |
| 6)  |     | Adjust Main-Dial to 500 if okay.<br>N-meter should be at 50-middle of scale. |    |       |
| 7)  |     | Adjust background meter in green section.                                    |    |       |
| 8)  |     | Isotope counter should read "000".                                           |    |       |
| 9)  |     | Press Comp-Test to read "256".                                               |    |       |
| 10) |     | Meter-speed to "med".                                                        |    |       |

If no fluctuation, connect PMT and switch to "Operate", start survey.

Computer PC2 and printer Interface.

Read instruction manual carefully.

The Algor Program is stored in the memory; before any field trip, check the writing pen, make Algor Log Test.

## OPERATION

- a) Power on.
- b) Type Run (Mode in Run position).  
ENTER
- c) Type No-If no cassette required.  
ENTER
- d) Type Log # or let Log sequence run.  
ENTER
- e) Start survey - write in the instrument readings.

OCTOBER 3, 1996

DEAR MR. KOLEBA,

I HAVE ASSAYED THE ORE SAMPLES YOU SUBMITTED AND HAVE FOUND THE FOLLOWING RESULTS:

DARK SAMPLE: THE SAMPLE WAS LEACHED IN A THREE STEP PROCESS:  
(CLAY)

- A. H2O AND H2O2 WAS USED AS A PRE-LEACH TO REMOVE POSITIVE CHARGES ASSOCIATED WITH THE HUMIS IN THE ORE.
- B. H3PO4 PLUS Br WAS USED TO LEACH FOR 4.5 HOURS USING TAP H2O.
- C. RECOVERY WAS BY ELECTROWINNING AN THEN A ZERO DROP USING NH3

RECOVERY = 1.65 OZ. AU PLUS .22 OZ. PT-GROUP PER TON OF ORE.

LIGHT TAN SAMPLE: THE SAMPLE WAS LEACHED USING THE SAME FORMULA AS ABOVE.

RECOVERY = 2.6 OZ <sup>AU</sup> PLUS .7 OZ PT GROUP PER TON OF ORE.

OBSERVATIONS AND RECOMMENDATION:

DARK SAMPLE (CLAY): SAMPLE APPEARS TO BE A VOLCANIC TUFF, WITH LARGE AMOUNTS OF SULFIDES (FREE) AND HUMIS. I RECOMMEND THAT A PRE-TREATMENT WITH A HIGH TEMPERATURE AT 900 DEGREES C FOR ONE HOUR AND QUENCH IN A FORMULA OF H2O PLUS H3P04 PLUS BR.

LIGHT TAN SAMPLE (CLAY): SAMPLE APPEARS TO BE A FINELY GROUND FE OXIDE HIGHLY SELICIOUS WITH MICOUS INTRUSIVE VEINLETS, WITH FREE AU PRESENT IN QUANTITY.

RECOMMENDATIONS: A LONGER LEACH PERHAPS 24 TO 48 HOURS.

THANK YOU FOR GIVING ME THE OPPORTUNITY TO DO THIS SAMPLE.

BEST REGARDS

  
KENNETH N. THANSTROM

Dear Mr. Koleba:

Your long awaited assays are done they are as follows:

May tower 30 feet--	.06 Au P/T
May tower--	0.00 " "
# 124--	0.00 " "

Now that it is dry up there, you can send more samples?.

write down my address, things will get here much faster if you use it!.

Best Regards,

K. N. THANSTROM
