MAR 20020011: BAD HEART SANDSTONE

Received date: Nov 22, 2002

Public release date: Nov 24, 2003

DISCLAIMER
By accessing and using the Alberta Energy website to download or otherwise obtain a scanned mineral assessment report, you ("User") agree to be bound by the following terms and conditions:

a) Each scanned mineral assessment report that is downloaded or otherwise obtained from Alberta Energy is provided "AS IS", with no warranties or representations of any kind whatsoever from Her Majesty the Queen in Right of Alberta, as represented by the Minister of Energy ("Minister"), expressed or implied, including, but not limited to, no warranties or other representations from the Minister, regarding the content, accuracy, reliability, use or results from the use of or the integrity, completeness, quality or legibility of each such scanned mineral assessment report;

b) To the fullest extent permitted by applicable laws, the Minister hereby expressly disclaims, and is released from, liability and responsibility for all warranties and conditions, expressed or implied, in relation to each scanned mineral assessment report shown or displayed on the Alberta Energy website including but not limited to warranties as to the satisfactory quality of or the fitness of the scanned mineral assessment report for a particular purpose and warranties as to the non-infringement or other non-violation of the proprietary rights held by any third party in respect of the scanned mineral assessment report;

c) To the fullest extent permitted by applicable law, the Minister, and the Minister’s employees and agents, exclude and disclaim liability to the User for losses and damages of whatsoever nature and however arising including, without limitation, any direct, indirect, special, consequential, punitive or incidental damages, loss of use, loss of data, loss caused by a virus, loss of income or profit, claims of third parties, even if Alberta Energy have been advised of the possibility of such damages or losses, arising out of or in connection with the use of the Alberta Energy website, including the accessing or downloading of the scanned mineral assessment report and the use for any purpose of the scanned mineral assessment report so downloaded or retrieved.

d) User agrees to indemnify and hold harmless the Minister, and the Minister’s employees and agents against and from any and all third party claims, losses, liabilities, demands, actions or proceedings related to the downloading, distribution, transmissions, storage, redistribution, reproduction or exploitation of each scanned mineral assessment report obtained by the User from Alberta Energy.
I, August Hangartner of Leduc, Alberta, T9E 6E1, do solemnly declare: That costs as outlined in the 1999 - 2001 Exploration of the Otauwau Area Property assessment of metallic and industrial permit 9395020018 report were expended as indicated in the Summary of Reasonable Expenditures.

And I make this solemn declaration conscientiously believing it to be true, and knowing that it is of the same force as if made under oath and by virtue of The Canada Evidence Act.

Declared before me at the city of Edmonton in the Province of Alberta, this twenty sixth day June, A.D. 2001

ANGELA SHAVER
A Commissioner for Oaths
in and for the Province of Alberta. My commission expires on the 26th day of March, 20____

A Commissioner for Oaths in and for the Province of Alberta
Printed or Stamped name of Commissioner for Oaths and date on which appointment expires

List Of Appendices

Appendix 1: Statement of Reasonable Expenditures .................... A1
Appendix 2: Methods of Ground Magnetic Surveying Employed ......... A2
1. **SUMMARY**

Alberta metallic and industrial minerals permit 9395020018, herein referred to as Otauwau Area Property, located south of Mitsu Lake, Alberta in the northeastern part of the Swan Hills were further explored for primary diamond deposits. A number of anomalous areas depicted from several high resolution aeromagnetic (HRAM) surveys acquired from Spectra Exploration Geoscience Corporation and Terraquest Ltd. along with areas recommended by Halferdahl & Associates Ltd. were investigated.

756736 Alberta Ltd. conducted ground magnetic surveys to more precisely localize the source or possible sources, of some of the aeromagnetic anomalies. Several topographic circular oval-shaped physiographic features were also investigated.

2. **INTRODUCTION**

During 1997 through to early 1999 exploration for primary diamond deposits was conducted within the Otauwau property. These activities included the acquisition of high-resolution aeromagnetic data from Spectra Exploration Geoscience Corp. and Terraquest Ltd.; ground magnetometer surveys by Blanket Earth Resources Ltd. in conjunction with 756736 Alberta Ltd.; and a brief review of aerial photographs, digital elevation data, and other publicly available information by Halferdahl & Associates Ltd. Assessment reports, ‘1997 and Early 1998 Exploration of the Lesser Slave Lake Property’ and ‘1998 - 1999 Exploration of the Lesser Slave Lake Otauwau Area Property’, describes the exploration conducted.

The assessment report herein, describes the exploration conducted at the Otauwau Area Property during 1999 through early 2001. It has been prepared by 756736 Alberta Ltd. who is the owner of the metallic and industrial minerals permit 9395020018.
3. LOCATION AND ACCESS

Property Location

The property is located in north-central Alberta, about 200 km northwest of the City of Edmonton and 13 km southeast of the town of Slave Lake. The property extends from 55°06'30" to 55°12'00" north latitude and 114°27'30" to 114°37'00" west longitude, within NTS map sheets 83 O/1 and O/2.

Property Access

The property is accessible by graveled oil and gas service roads leading from Highway 2, 16 km east of the town of Slave Lake, due south of the Mitsu Industrial Area turn-off approximately 4 km. (Fig. 3.1). There are many logging and oilfield service roads throughout the exploration area (Fig. 6.1). Seismic line, pipeline, and power-line lines provide all-terrain vehicle or snow-machine access to remote areas of the property.

Infrastructure near the area includes accommodations, food, and vehicles at Slave Lake.

Property Geology

Most of the property was devastated by a major forest fire that occurred in July 1998 and was extensively logged for salvage during the exploration period. The property also contains substantial amounts of oilfield culture. Economic activities in the area are dominated by logging and timber operations and oil and gas exploration and development. The property is in the northeastern part of Swan Hills within the hydrographic basin of the Otawau River.
4. EXPLORATION

Work Description

Between Feb 27, 1999 and Feb 27, 2001, 756736 Alberta Ltd. carried out more preliminary ground follow-ups of the HRAM anomalies and other features that were identified in a preceding report. Other lower intensity HRAM anomalies and several circular physiographical features were flagged and ground magnetic survey follow-ups were done on several of these.

Site Selection

The property contained considerable amounts of cultural interference complicating selection. HRAM data processing and editing may have eliminated geographically significant anomalous not shown on the aeromagnetic maps but that perhaps could be confirmed by ground measurements. Raw data processing using Geosoft Software showed that there were several small anomalies that do not have verified cultural sources.

The strategy chosen was to profile areas of the property that were indicated as weak magnetic anomalies on the HRMS flyby then using this information we discarded unlikely prospects, downsizing being the key objective. Profiles were flagged and stations measured using hip chain, compass, and GPS on sixteen of these areas. The length of the profile chosen depended on the terrain and the data available.

Data collected for each profile was uploaded via Internet and processed at a later date (For data collection methods, processing methods and equipment used see Appendix 2 – Methods of Ground Magnetic Surveying Employed).

Findings

P6019-1, P6019-2, P6118, P6117, P5714, P6012, P5712, P5411-1, P5411-2, P5213-1, P5213-2, P5216, P5515, P5615, and P5819 varied by 5 nT or less.
5. CONCLUSIONS

The ground magnetic profiles conducted do not confirm the presence of anything significant in the selected weak anomalies depicted on the aeromagnetic survey maps and none of the areas investigated warrant further exploration. The results were not unexpected. The strategy taken was to investigate the weaker anomalies and use this information to downsize the exploration area. All anomalies depicted on the aeromagnetic map should still be investigated.

</table>

The areas retained were selected using selection criteria suggested by Halferdahl & Associates Ltd., topographic circular/oval-shaped physiographic features; anomalies depicted on 1997 Spectra Exploration Geoscience Corp. and Terraquest Ltd. HRAM survey maps; ground magnetometer surveys; and an extensive review of aerial-photographs, digital elevation data, topographic maps and other publicly available information, by 756736 Alberta Ltd..
Table 6.1 lists the areas of the permits that 756736 Alberta Ltd. wants retained. Figure 6.1 should also depict this same information. If there is a discrepancy between the table and the figure, please use the information depicted in the figure. Cancel all shaded areas of the original permits as depicted in figure 6.1.

Distances Gridded and Surveyed

Total ground magnetic survey line/km = 10.636

Exploration Expenditures

Please allocated the exploration expenditures for Feb. 1999 – Feb. 2000 as follows:

Retained Active Area A - $22,467.30
Retained Active Area B - $1,433.20

For a summary of expenditures see Appendix 1 – Statement of Reasonable Expenditures. Retained Active Areas are depicted in Fig. 6.1. (A detailed breakdown of dates, activities and equipment used has been retained and is available upon request.)

Metallic and industrial minerals permit 9395020018 is held privately by 756736 Alberta Ltd. and exploration expenditures are not financed by shareholders.

7. QUALIFICATIONS

Qualifications and work experience of the author of this report:

Education:

Work experience:
Many years experience as a Technical Systems Analyst working with complex computer systems, programming, troubleshooting, interfacing devices, etc.

I have no formal training in Geology. Prospecting is only a hobby.

Above is a summary of reasonable expenditures ascribed from quoted commercial equipment rental rates less 10 or 20%. Many, many more man hours than the summary above indicates were spent on this project, and one could reasonably ascribe some $50.00 per man hour to work of this nature in professional fees, however, this would be an unreasonable amount to justify considering the qualifications of the exploration teams, therefore, $30.00 - $35.00 per man hour and the shortened claimed duration should be more appropriate.

I, August Hangartner, hereby certify that the costs as outlined above for the assessment of metallic and industrial permit 9395020018 for Feb 1999 - 2001, were expended as indicated.

August Hangartner
Appendix 2: Methods of Ground Magnetic Surveying Employed.

**Collection Method**

The magnetic surveys were performed using an Overhauser Model GMS-19 Memory Magnetometer carried by the operator devoid of any magnetic materials and other ferrous metals. The operator walked each survey line, recording continuous *time* and *magnetic intensity* readings at 3 second intervals. At fixed stations along each survey line, the exact time of arrival and the location of the station were logged for post processing.

The base magnetometer, an Overhauser Model GSM-19 located at a fixed position operating in base mode, recorded continuous time and magnetometer readings at 3 second intervals for post processing diurnal correction. Both units are proton magnetometers with omnidirectional sensors.

**Processing Method**

The collected data: base (time and reading), mobile (time, reading and location) and the GPS readings - were downloaded in the field to a Pentium II/266 based laptop processor. The data was then uploaded, via the Internet, for post processing and plotting.

Using a program, written in Microsoft Access on a Pentium II/300 PC processor, variations of the base station were subtracted from the field mobile instrument data to give a data set which varies only with position. The GPS information was used to map the survey and the survey description was used to scale the location of each station. The logged location time and *survey reading* time were used to correlate measurements with location. The data collected at each station is therefore attributable to local variations in magnetic materials in the underlying rocks. Another Microsoft Access program module was used to process the data collected at 3 second intervals by spacing the readings evenly between the station locations at which they occurred. The addition of the latter process gives a more accurate presentation of what data might be present between stations.

The data was then processed using Geosoft Oasis Software. The maps produced represent profile of *magnetic field intensity* measurements, which in turn are determined from a survey of equally spaced points between nodes that have been interpolated from the original data.
