

# MAR 20060017: EAST FIREBAG

Received date: Sep 19, 2006

Public release date: Oct 09, 2007

## ***DISCLAIMER***

By accessing and using the Alberta Energy website to download or otherwise obtain a scanned mineral assessment report, you ("User") agree to be bound by the following terms and conditions:

- a) Each scanned mineral assessment report that is downloaded or otherwise obtained from Alberta Energy is provided "AS IS", with no warranties or representations of any kind whatsoever from Her Majesty the Queen in Right of Alberta, as represented by the Minister of Energy ("Minister"), expressed or implied, including, but not limited to, no warranties or other representations from the Minister, regarding the content, accuracy, reliability, use or results from the use of or the integrity, completeness, quality or legibility of each such scanned mineral assessment report;
- b) To the fullest extent permitted by applicable laws, the Minister hereby expressly disclaims, and is released from, liability and responsibility for all warranties and conditions, expressed or implied, in relation to each scanned mineral assessment report shown or displayed on the Alberta Energy website including but not limited to warranties as to the satisfactory quality of or the fitness of the scanned mineral assessment report for a particular purpose and warranties as to the non-infringement or other non-violation of the proprietary rights held by any third party in respect of the scanned mineral assessment report;
- c) To the fullest extent permitted by applicable law, the Minister, and the Minister's employees and agents, exclude and disclaim liability to the User for losses and damages of whatsoever nature and howsoever arising including, without limitation, any direct, indirect, special, consequential, punitive or incidental damages, loss of use, loss of data, loss caused by a virus, loss of income or profit, claims of third parties, even if Alberta Energy have been advised of the possibility of such damages or losses, arising out of or in connection with the use of the Alberta Energy website, including the accessing or downloading of the scanned mineral assessment report and the use for any purpose of the scanned mineral assessment report so downloaded or retrieved.
- d) User agrees to indemnify and hold harmless the Minister, and the Minister's employees and agents against and from any and all third party claims, losses, liabilities, demands, actions or proceedings related to the downloading, distribution, transmissions, storage, redistribution, reproduction or exploitation of each scanned mineral assessment report obtained by the User from Alberta Energy.

**1.****SUMMARY**

Between 2005 and early 2006, exploration of Metallic and Industrial Minerals (MAIM) Permit 9304050884 of Graymont Western Canada Inc. along the Firebag River, northeast of Fort MacKay, included two property visits and the relogging of historic drill cores that were stored at the EUB core storage facility in Calgary, Alberta.

Results of the exploration showed the permit to be underlain by significant thicknesses of Cretaceous sediments; which in turn, are unconformably underlain by variably quality limestone, argillaceous limestone, dolomitic limestone, calcareous shales and calcareous sandstones, likely of the Slave Point and Methy formations.

The 2005 thru 2006 exploration expenditures for MAIM Permit 9304050884 totaled \$48,119.25 (Part C, Appendix 1). The expenditures were sufficient to maintain the entirety of the property in good standing. The expenditures are to be applied towards work period years 1 and 2, and excess expenditures carried over to work period years 3 and 4 for the retained lands.

**2.****INTRODUCTION**

The exploration objectives of the 2005 thru 2006 exploration were to locate high-quality carbonate rocks of the Slave Point Formation below the sub-Cretaceous unconformity and evaluate their quarriability. To achieve the objectives, two separate visits to the property were conducted in order to locate outcrops along Firebag River. In addition, a visit was made to the EUB core storage facility in Calgary, Alberta, where historic drill cores from the permit area were re-logged.

**3.****LOCATION AND ACCESS**

MAIM Permit 9304050884 (Fig's. 3.1 and 3.2) is located within National Topographic System Map Sheets 74 E/6, 74E/7, and 74E/11, and is centered at approximately 57°29' N latitude, 110°59' W longitude.

The permit area can be accessed by traveling from Edmonton to Fort MacKay along Highway 63 from Edmonton to Fort MacKay, and then north along the winter road towards Fort Chipewyan. Trails and cutlines were utilized with ATV's to access and explore the property.

In total, seven historic drill cores were examined from the permit. Their locations are shown in Fig. 3.3.

**4.****WORK PERFORMED**

The work on the East Firebag Permit was conducted by Dahrouge Geological Consulting Ltd. (Dahrouge) on behalf of Graymont Western Canada Inc. (Graymont).

From August 12 to 19, 2005, the northern section of the property was explored on the ground, by hiking along Firebag River. From September 16 to 19, 2005, the southern section of the property along Firebag River was examined with the use of a helicopter (Appendix 2). Subsequently, logs from historic drill holes were examined, and depths to the sub-Cretaceous unconformity estimated (Appendices 3A and 3B).

From April 10 to 13, 2006, seven historic drill cores, stored at the EUB core storage facility in Calgary, Alberta, were examined and individual stratigraphic units described, measured, and quality assessed using a solution of 5% HCl (Appendix 4).

**5.****RESULTS**

The ground exploration conducted in the northern portion of the property revealed no dolomite or limestone outcrops, only Cretaceous sandstones and tar sands. The helicopter reconnaissance work identified one limestone outcrop, described as a grey, fine-grained, well-bedded lime mudstone (Appendix 2; Fig. 3.3).

A total of fourteen drill holes were previously completed for tar sands exploration within the East Firebag Permit. Logs from these holes were examined, and depths to the sub-Cretaceous unconformity estimated, ranging from 30 m to 200 m (Appendix 3B; Fig. 5.1).

In April, 2006, seven historic drill holes were examined and logged (Appendix 4; Fig. 3.3). All of the drill holes intersected Paleozoic sequences of the Methy or Slave Point formations. At the East Firebag Permit, the drill holes showed the Devonian units to consist primarily of moderate to good quality lime mudstone; and low quality, brecciated limestone, argillaceous limestone, dolomitic limestone and calcareous sandstone.

**6.****CONCLUSIONS**

In the permit area, the depth to the sub-Cretaceous unconformity varies greatly and reaches approximately 200 m. Very limited outcrop exists, as only one outcrop was identified during 2005 exploration. The section was lime mudstone, likely of the Slave Point Formation.

Diamond drilling is recommended as the next stage of exploration to accurately determine the depth and quality of the underlying carbonates within the property area.

## STATEMENT OF AUTHOR

I, Jody Dahrouge, residing at 11 Country Lane, Stony Plain, Alberta, do hereby certify that:

- I am a geologist of Dahrouge Geological Consulting Ltd., Suite 18, 10509 - 81 Ave, Edmonton, Alberta, T6E-1X7.
- I am a graduate of the University of Alberta, Edmonton, Alberta with a B.Sc. in Geology, 1988 and a Special Certificate (Sp.C.) in Computing Science in 1994.
- I have practiced my profession as a geologist intermittently from 1988 to 1994, and continuously since 1994.
- I am a registered professional geologist with the Association of Professional Engineers, Geologists and Geophysicists of Alberta, member M48123.
- I hereby consent to the copying or reproduction of this Technical Report following the one-year confidentiality period.
- I am the author of the report entitled "2005 and 2006 Exploration of the East Firebag Permit" and accept responsibility for the veracity of technical data and results.

Dated this 18<sup>th</sup> day of September, 2006.

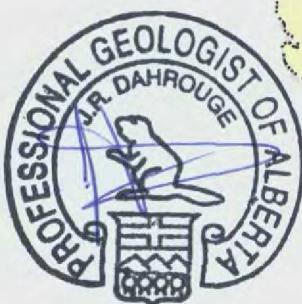

Jody Dahrouge, BSc, PGeol

**APPENDIX 4: LITHOLOGICAL LOGS FOR HISTORIC DRILL HOLES FROM THE EAST FIREBAG PERMIT**

**Abbreviations:**

- WW - Waterways Formation
- FB - Firebag Member (of the Waterways Formation)
- SP - Slave Point Formation

**DIAMOND DRILL LOG**

**Hole ID:** 3

**Company:** Suncor

**Well Name:** Suncor Audet 12-7-98-7

**Total Depth:** 47.00m

**Date Logged:** April 10-13, 2006

**Logged By:** W. McGuire and S. Talwar

From (m)	To (m)	Thick. (m)	Formation	Member	Description
26.60	36.00	2.87	McMurray	-	McMurray oilsands
36.00	36.40	0.12	McMurray (?)	-	coarse calcareous sandstone, clear quartz grains cemented with calcite matrix (< 1/2 mm), good HCl reaction
36.40	41.60	1.58	McMurray (?)	-	mudstone, dark greyish brown to medium grey-brown, very little HCl reaction
41.60	44.00	0.73	McMurray (?)	-	mostly coarse calcareous sandstone with minor interbeds of dark-brown mudstone
44.00	44.40	0.12	McMurray (?)	-	as 36.0 - 41.6 m intervals
44.40	47.00	0.79	McMurray (?)	-	as 36.0 - 36.4 m interval, porous, calcareous quartz sandstone, rounded clear quartz grains (up to 1/2 mm) in limy cement

DIAMOND DRILL LOG

Hole ID: 6

Company: ?

Well Name: Synenco 04-104 Firebag 14-21-98-7

Total Depth: 90.89m

Date Logged: April 10-13, 2006

Logged By: W. McGuire and S. Talwar

From (m)	To (m)	Thick. (m)	Formation	Member	Description
74.72	75.47	0.23	McMurray	-	oilsands
75.47	75.84	0.11	McMurray	-	mudstone, medium olive-grey, no fizz
75.84	83.40	2.30	SP (?)	-	lime mudstone, light grey at top grading to darker grey at base, beds at top are perpendicular to core axis, changing slowly to 55° to CA at base
83.40	87.60	1.28	SP (?)	-	lime mudstone, light tan-grey , well bedded, with thin medium brown partings, 80-85° to CA beds, 10 cm intervals at base of collapse breccia
87.60	89.10	0.46	SP (?)	-	lime mudstone, light tan-grey, faintly bedded, 70° to CA beds, partings are tan-brown
89.10	90.89	0.55	SP (?)	-	massive lime mudstone, very light grey, 70°-85° to CA beds, 10-15 cm intervals of brecciated rock near base

EOH

DIAMOND DRILL LOG

**Hole ID:** 7  
**Company:** ?  
**Well Name:** Synenco 04-077 Firebag 1AA/9-28-98-7

**Total Depth:** 70.1m

**Date Logged:** April 10-13, 2006

**Logged By:** S. Fraser

From (m)	To (m)	Thick. (m)	Formation	Member	Description
55.00	55.48	0.48	McMurray	-	oilsands, lower contact with McMurray at 75-85° bedding to core axis, fine upper sequence, last 15-18 cm is water sand, last 24 cm is mudstone
55.48	62.05	6.57	WW (?)	FB (?)	light grey to grey, highly argillaceous, distinctive bedding at 80° to core axis with shaly partings, minor brecciation in parts
62.05	66.52	4.47	WW (?)	FB (?)	light to dark grey, very fine grained, fragmented in parts with shaly partings, locally abundant molluscs, bedding planes are apparent at 80° to core axis
66.52	70.10	3.58	WW (?)	FB (?)	light to dark grey, progressively more argillaceous, bedding at 80° to core axis, lower 1 m has increasing clay content
EOH
